## OBJECTIVE:

MSc Computer Science student specializing in ML and Data Science, with hands-on experience in Python, SQL, and deploying ML models on cloud platforms.

## EDUCATION:

**University of Texas – Arlington, TX, USA** **Aug 24 - Present**

Master of Science in Computer Science

GPA: 3.78/4.0

Related Coursework: Artificial Intelligence, Data Mining, Computer Vision, Database Systems, ML

**Gandhinagar Institute of Technology, Kalol, Gujarat, India** **Sept 20 – Jun 24**

Bachelor of Engineering in Information Technology

Related Coursework: Data Structures, Software Engineering, Machine Learning, Computer Vision

## TECHNICAL KNOWLEDGE:

| | |
|---|---|
| **Languages:** | SQL, Python, R, HTML, CSS, C, C++, JavaScript, ReactJS |
| **Technologies**: | Yolov8, OpenCV, Fast API, Flask, Jupyter Notebook, Power BI, Tableau, IBM Watsonx Assistant, Google Colab, TensorFlow, PyTorch, Postman, REST APIs, Django, NodeJS, Git |
| **Databases**: | MySQL, Snowflake, PostgreSQL |
| **Cloud & Deployment**: | AWS, GCP, Docker |
| **Certifications**: | IBM Applied AI Certification, LinkedIn Learning for Python Data Analysis |

## WORK EXPERIENCE:

**Molmeh Technolabs, India – *AI Intern*** **Jan 24 – April 24**

- Engineered "Document Insights using Generative AI" using Python, Django, PostgreSQL, and BambooLLM for real-time document querying, boosting retrieval efficiency by 30% across 100,000+ documents.
- Enabled faster, more accurate decisions by deploying the solution with cross-functional teams.

**Durian Pvt. Ltd., India – *AI Intern*** **July 23 – Aug 23**

- Achieved 99.38% accuracy on Labeled Faces in the Wild benchmark using dlib face recognition model, demonstrating advanced expertise in AI face recognition.
- Integrated OpenCV for real-time webcam interaction, enabling dynamic user engagement during model demonstrations.

## PROJECTS:

**Football Match Analysis – *Computer Vision Project*** **Nov 25 – Dec 25**

- Developed an end-to-end football match analysis system using YOLOv8 and OpenCV to detect, track, and analyze players, referees, and ball movements from match videos.
- Implemented advanced analytics including team assignment, ball possession, camera motion compensation, and player speed & distance metrics, producing fully annotated output videos for tactical insights.

**Tomato Disease Classification – *Deep Learning Project*** **June 25 – July 25**

- Achieved 94% test accuracy using a CNN model trained on 18,000+ annotated leaf images for multi-class tomato disease detection.
- Deployed a lightweight Flask API on Google Cloud Functions, enabling 3x faster predictions with React-based frontend.

**Banglore House Price Prediction – *Machine Learning Project*** **Feb 25 – Mar 25**

- Developed and deployed ML model on AWS EC2 predicting house prices with 20% improved accuracy through advanced feature engineering.
- Utilized Python, Pandas, Scikit-learn; orchestrated end-to-end pipeline to enable scalable deployment.

## LEADERSHIP EXPERIENCE:

**Team Leader | Azadi ka Amrit Mahotsav SSIP Hackathon, Gujarat, India**

- Led a team of 8 members resulting in a top 10 finish among 96 teams.
- Demonstrated strong teamwork, coordination, and strategic thinking in product development & presentation.
